

TRI V 19 9 6-O

For Welding Professionals

A stainless steel self shielded flux cored wire for out of position repair and maintenance welding

TRI V 19 9 6-O provides flexibility and versatility for outdoor or out of position repair and maintenance jobs.

This innovative flux cored wire is the ideal solution for welding jobs where a shielding gas is not available or impractical, or as a replacement to stick electrodes for increased productivity.

Welding Alloys prides itself on continuous innovation and product development to ensure we can provide solutions that meet the specific needs of our customers, and TRI V 19 9 6-O is no exception!

Why choose this solution?

- Easy to use in horizontal and vertical up position
- Outstanding slag release
- Clean surface and sound deposit
- Strong tough austenitic weld metal composition (19%Cr - 9%Ni - 6%Mn)
- Greater productivity for outdoor jobs compared to stick electrodes (+2.5 times more productive)

Product Details

Classification: ISO 17633-A: T Z 18 8 Mn N P NO 1

AWS A5.22: E307T1-3 (nearest)

Available Diameter: 1.2 mm

Hardness: 180 HB (as welded, three-layer deposit)

47 HRC (work hardened, three-layer deposit)

Welding Positions:
