

Workshop Maintenance Kit (WMK) Machine

For Welding Professionals

**A portable automated
machine for workshops or
on-site maintenance**

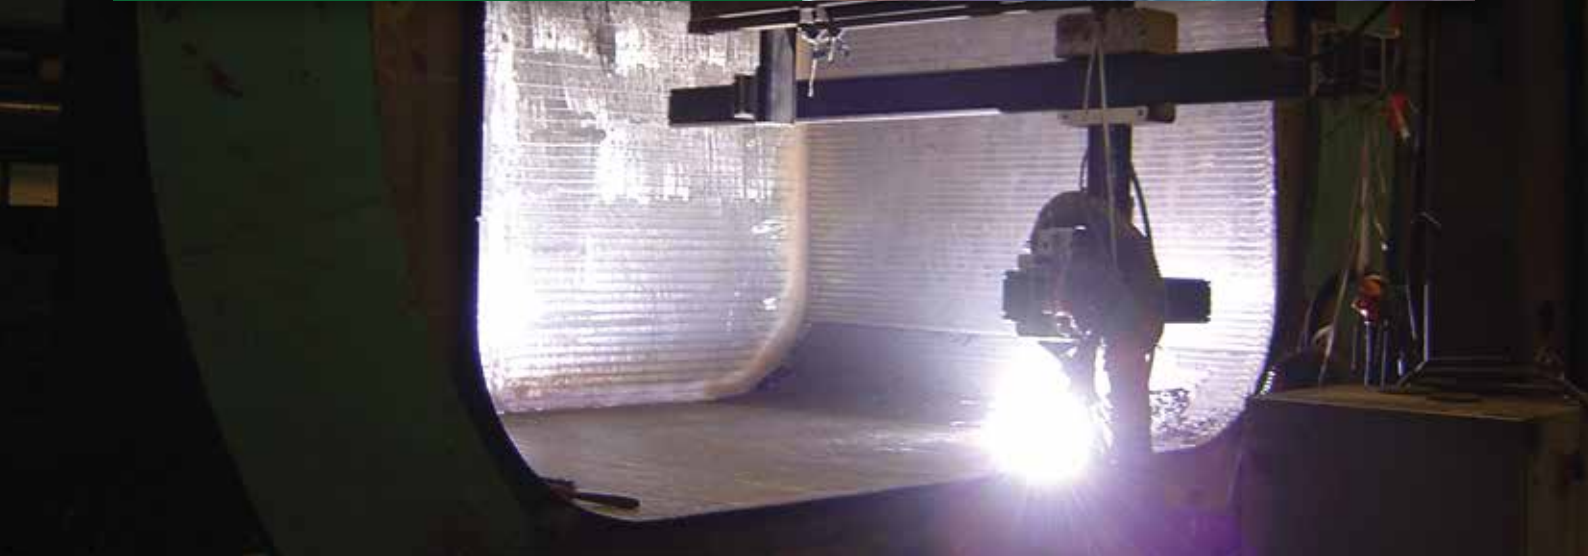

Our Workshop Maintenance Kit (WMK) offers portable, automated welding for a range of general hardfacing, cladding or joining applications. This is a cost-effective welding machine that boasts a lightweight frame with a modular design and easy assembly into a range of configurations to get the job done. The WMK can be set up to weld on top of a lathe, a manipulator, a rotating table, or be used to carry out welding in situ.

A cost-effective piece of welding equipment that will increase welding efficiency and provide a quick return on investment.

Why choose this solution?

- Huge reduction in cost compared with manual welding solution
- A range of welding options – hardfacing, cladding and joining
- High level of quality control

Key Features

- Multiple lightweight modular components
- Repeatable programming
- X, Y movement
- Weld pattern: oscillation beads

Control System D3 Pendant

The D3 Pendant control box uses the latest generation D3 technology and is the main control system used to operate most of our modular and portable welding equipment. Small, light and easy to use, it has everything needed to perfectly execute even the most precise welds.

Additional Options

- Water cooled welding kit
- Single wire-feed unit with wire straightener
- Interface with power source
- Power source
- Fume extraction
- Submerged arc welding (Small manual hopper)
- Interface with rotary device
- Transmission drive kit
- Spindle device
- Gas shielded welding gun kit
